DESCRIPTORS: *Titanium alloys, *Aluminum alloys,
*Heat resistant metals and alloys, *Creep, Mechanical
properties

Titanium alloys of composition approximating to Ti6Al
are shown to have outstanding creep strength at tem-
peratures up to 700°C, being superior to austenitic
steels. The results can be explained theoretically.

Rough draft trans. of Akademiya Nauk SSSR. Doklady,
1954, v. 95, no. 3, p. 543-545.

An investigation of a solid Ni solution of the Ni-Cr system and of Ni_3Cr formation was made with microstructural analysis, electric resistance, dilatometry, X-ray and phase-analysis methods. Results indicate that Ni_3Cr formation occurs slowly from the solid solution at 460° , and agrees with the general concept of the greatest conversion rate in an alloy corresponding to stoichiometric composition and the rate decrease by excess addition.
